

prime numbers

(a round in $2^3 - 1$ parts)

(order of pitches)

polansky

The primes
get quite large
in some way that's
hard to un-der-stand.
For ma-nu years math-e-ma-ti-cians have tried
to fi-gure out why the primes are where they are and not
some place else. But no-body seems to know, not eu-en Riem-ann.

Each part sings the complete round 7 times. Each time thru, use only one pitch (in any octave) taken, in order, from the pitches indicated at the beginning. Change pitches each time thru. If possible, sing the tuning of the harmonic series: the Bb about 1/6th-tone flat, the F# and A about 1/4-tone flat. Instruments can be used to help out.
